FIRE & RESCUE

Dear Parents and Guardians,

As the weather improves, many children and young people spend more time near rivers, lakes and other open water. These places can look inviting, but they often carry hidden dangers such as cold-water shock, strong currents and sudden changes in depth.

During the warmer months, more children and young people spend time outdoors and around open water such as rivers, lakes, reservoirs, quarries, ponds, and the coastline. Sadly, every year there are incidents where individuals get into difficulty in and around water. By sharing important water safety messages before the school holidays begin, we hope to help parents and carers will have conversations with their children about staying safe.

The attached information provides practical advice on water safety, recognising potential dangers, and what to do in an emergency. Increasing awareness of these simple safety messages can play an important role in preventing avoidable incidents and keeping our communities safe throughout the summer. Please take a few minutes to read through it together. A short conversation at home can make a real difference and help prevent accidents.
